

Orlimex UK Ltd present a CPD which gives an introduction to Fibre Reinforced Polymer (FRP) reinforcement for reinforcement and crack control of concrete elements.

The presentation includes information on material production, discussion of material properties and how they relate to current standards. The American Concrete Institute Design Guide 440 is seen as the accepted document when designing with FRP and we consider the relevant ASTM standards which relate to ACI440.

We also examine the pros and cons of use of FRP and the limitations for use for both Basalt and Glass products.

Presentation takes around 40 minutes with further questions.

The Orlimex range of FRP reinforcement is marketed under the Orlitech brand.

To book a CPD please contact Chris Hirst chris@orlitech.co.uk
